## SHPA strongly supports inquiry's call for more expert pharmacists in NSW hospitals

The Society of Hospital Pharmacists of Australia (SHPA) has welcomed the first report from the inquiry into ambulance ramping in New South Wales, strongly supporting its recommendations to increase Hospital Pharmacy positions, embed more expert Emergency Medicine Pharmacists into care teams, expand pharmacist-led prescribing and enable NSW residents to access subsidised medicines upon hospital discharge.

SHPA President Tom Simpson says the recommendations are a welcome sign of progress in Australia's most populous state, in which hospital pharmacy departments have been chronically understaffed.

'The report states, *"there are not enough hospital pharmacists in New South Wales public hospitals"*, and this is the simple truth.

'We strongly welcome the report's recommendation, in response to SHPA's member-led advocacy, that the NSW Government provide funding to increase the number of public Hospital Pharmacists.

'From our earliest submissions to directly providing evidence in parliamentary hearings, SHPA has stood up strongly for our profession in NSW and we look forward to working with the NSW Government to translate these recommendations into more expert, trained, team-based pharmacist roles.'

The [Impact of ambulance ramping and access block on the operation of hospital emergency departments in New South Wales](#) report calls for increased funding to support more Hospital Pharmacist positions that better align with emergency department operating hours; expansion of Partnered Pharmacist Medication Charting (PPMC), the earliest form of pharmacist prescribing in Australia, pioneered in the hospital setting; and for the NSW Government to become a signatory to the Commonwealth's Pharmaceutical Reform Agreements.

Mr Simpson says it is important NSW patients benefit from expanding hospital-led prescribing innovations and greater access to medicines on the Pharmaceutical Benefits Scheme (PBS).

'We need to follow the evidence: PPMC in emergency departments is a proven approach with patients admitted faster, freeing up clinical time for doctors, and embedding Emergency Medicine Pharmacists into stroke service teams has been shown to reduce the time to critical treatment for stroke patients by 12 minutes.

'The moment a patient leaves hospital presents another window of risk.

'Hospital Pharmacists are responsible for approximately a quarter of all PBS expenditure and supply just under five million PBS prescriptions annually to patients.

'If New South Wales signs up to the Commonwealth's Pharmaceutical Reform Agreements, Hospital Pharmacists can provide more medication to patients on discharge.

‘As the inquiry points out, this “improves patient wellbeing and reduces the risk of patients re-presenting to EDs if their medication runs out.”’

The recommendations came the day after the [Australian Institute for Health and Welfare confirmed](#) that Australian patients are staying longer and waiting longer in EDs before being seen by a healthcare professional; SHPA Chief Executive Kristin Michaels says training and funding more expert, specialised pharmacists to join patient-centred hospital teams will ease this pressure.

‘In 2019 we released the [Standard of practice in emergency medicine for pharmacy services](#), SHPA’s blueprint for emergency medicine pharmacy services to improve patient care while reducing total service cost in Australia’s emergency departments and short stay units, including 1:10 pharmacist-patient ratios.

‘The addition of a clinical pharmacist in EDs has been proven to reduce the number of medicines omissions and dosing delays, and we know introducing Emergency Medicine Pharmacists delivers further benefits, however these services are currently established in less than two-thirds of Australian hospitals.

‘Through the leadership of SHPA members, who are medicines experts working in busy and challenging clinical teams, our Standard provides clear guidance that supports the closing of this gap to the benefit of Australia’s most critically ill patients.’

**About SHPA**

The Society of Hospital Pharmacists of Australia (SHPA) is the national, professional organisation for the 6,100+ Hospital Pharmacists, and their Hospital Pharmacist Intern and Hospital Pharmacy Technician colleagues working across Australia’s health system, advocating for their pivotal role improving the safety and quality of medicines use. Embedded in multidisciplinary medical teams and equipped with exceptional medicines management expertise, SHPA members are progressive advocates for clinical excellence, committed to evidence-based practice and passionate about patient care.
